Informations arkitektur

Brugertest

Vi har teste vores website på en person. Hvis testen skulle have været bedre og mere brugbar, skulle vi have haft flere testpersoner og have teste websitet i flere af dets udviklingsfaser.

Vi lavede en tænke-højt-test hvor brugeren/testpersonen, Wencke, fik lov til at prøve websitet på smartphone, tablet og desktop.

Vi stillede følgende spørgsmål:

- Hvordan er det at navigere rundt på Sweetbot?
Jeg synes navigationen fungerede godt, men på smartphoneversionen var det irriterende at man skulle lukke menuen igen, når man kommer til det ønskede menupunkt. Men jeg synes det fungerer godt, at man ikke skal skifte side og det hele ligger på en side, så man kan rulle ned gennem hele side (*at det er en onepage*), men at man kan trykke på menuen og komme til det ønskede menupunkt. Jeg kan godt lide at når man klikker på shop, åbner den sig i en ny fane.
- Hvad synes du fungerer?
Sammenspillet mellem de tre forskellige versioner. De runde bobler under "vores specialer" giver et godt overblik, og for mig ville det være nemt at klikke mig ind på den kategori som jeg gerne ville vide mere om. Men kan fornemme at der er en sammenhæng mellem hjemmesiden (*Sweetbot*) og den der shop (*Hotbot*). Men kunne godt tydeliggøre det mere, hvis man måske kunne klikke tilbage til den første hjemmeside (*Sweetbot*).
- Er der noget der ikke fungerer?
Menuen på smartphone. Og så synes jeg at der godt måtte være nogle flere billeder, især på smartphoneversionen blev det lidt teksttungt. Jeg ved ikke om det er fordi skærmene er forskellige, men bund bjælken (*footeren*) ser meget brun ud på både tablet og smartphonen, men på computeren synes jeg at den ser sort ud. Rækkefølgen på HotBot er lidt mærkelig og giver ikke rigtig mening. (Side-rækkefølgen)
- Har du en idé om hvad Sweetbot er ud fra, hvad du har set på hjemmesiden?
Jeg tror det handler om noget med noget web design, og noget digital sikkerhed, det fik jeg hurtigt ide om ud fra menuen.
- Er der noget du mener der mangler?
Måske en søgefunktion, men den er måske ikke så nødvendig når menupunkterne giver meget god mening, i hvert fald for mig. Men nu forstiller jeg mig min mor som ikke er så god til at overskue hjemmesider, hun leder altid efter en søgefunktion, fordi ellers kan hun ikke finde noget som helst på en hjemmeside, altså ifølge hende selv. Men jeg kunne nok godt leve uden den.

Introduction

Overview

The purpose of these guidelines is to explain the use of the new brand style and to reinforce consistent application of the visual elements in all communications. This includes publications, presentations, and all other marketing materials both online and offline. Guidelines on the use of the logo are included.

A dark grey trapezoidal shape pointing to the right, containing the text 'SWEETBOT.DESIGN' in white, bold, uppercase letters.

SWEETBOT.DESIGN

A smaller version of the Sweetbot.Design logo graphic, with a vertical dashed line to its left labeled 'Page Edge' and a diagonal dashed line extending from its bottom-right corner labeled '45°'.

Our “identity”

Our corporate identity is the face and personality presented to the global community. It's as important as the products and services we provide. Our visual identity is the total effect of logo, products, brand name, trademark, advertising, brochures, and presentations—everything that represents us.

Because the brand cannot be compromised, we've created this guide to provide all the pertinent specifications you need to maintain its integrity. The guidelines set in this document are not meant to inhibit, but to improve the creative process. By following these guidelines, the materials you create will represent our company cohesively to the outside world.

The company background

sweetbot.design is an international oriented start-up company, currently with main focus on the Danish market. We are offering services and consulting within web design and web development, branding (visual identity) as well as internet security (network and data security), and are distributing our own custom web shop solution **hotbot**.

The sweetbot.design team consist of 6 permanent members and a wild bunch of associated freelancers.

2.0

The Logo Design

The company logo is an important and valued graphic element and must be used consistently and appropriately, even minor variations will undermine and compromise the image of the branding.

The logo consists of a blue horizontal rectangle with a diagonal cut on the right side. The text "SWEETBOT.DESIGN" is written in white, uppercase, sans-serif font across the rectangle.

Primary logo - in colour

Primary logo - alternative colours

2.1

The Logo Usage

Always use master artwork when reproducing any logo design. It should never be recreated under any circumstances. Always ensure you are using the correct artwork for the application.

When reproducing any logo elements, *only* the original high resolution or vector graphic files shall be used - logos *should not* be taken from this document.

Exclusion Zone

Make sure that text or other design elements do not encroach upon the logo.

The marked space should always be given to let the logo 'breathe', free from distraction.

Minimum reproduction size

In the primary logo format a minimum size must be adhered to so that legibility is retained.

In exceptional circumstances where space is below the recommended size, adjustments may have to be made to balance the shape and visibility.

Wrong!

The logo has become distorted from its designed aspect ratio, therefore stretching or squashing the shape and text.

If the space is restrictive, the scale of the logo (*not* the dimensions) must be adjusted to fit.

Correct!

The logo's shape is consistent with the initial design, retaining balance and legibility.

Wrong!

The backdrop for the logo's placement is too similar to the primary colour - it lacks visibility and contrast.

To fix this problem, you can either select a contrasting base colour, or switch to one of the secondary colours assigned to the logo.

Correct!

The logo is clear and visible, set in primary colours onto a backdrop which shows contrast.

Although the backdrop is not white, the colours have been adjusted accordingly to work with the design.

Wrong!

Important elements within the logo have been distorted, enlarged or shrunk, affecting the balance and design.

A consistent layout is essential across all media, and by changing key elements it will introduce confusion into the brand.

Correct!

The logo has been used in the fashion it was designed. A consistency has been achieved in how it is seen.

Wrong!

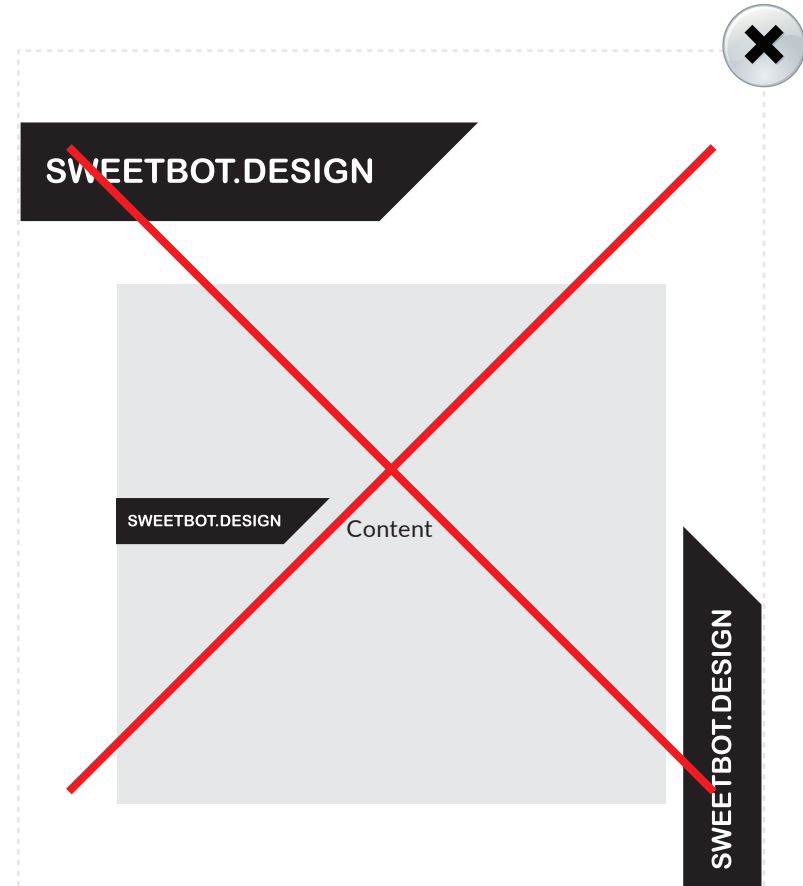

A colour outside of the selected brand colour scheme has been used. This is not recommended as it confuses the brand image.

Replacing the font is a definite no-no. The selected typeface should be used at all times with the presentation of the logo.

Correct!

The logo is presented in its primary colours using the primary typeface that has been selected for the logotype.

In most cases, use of **one** company logo is all that is required. If an advertiment is made by your company then that logo is usually all that is required for recognition by your audience and/or customers.

Colour Scheme

Accurate reproduction of the brand colour scheme is essential in communicating a clear and consistent message about the company image.

The Pantone colours should be used wherever possible, with CMYK / RGB being matched as closely as possible depending on the materials and print process.

Black and white are acceptable as accent colours, in addition to the colours within the assigned scheme.

		Pantone colour ref.	CMYK	RGB	HEX
Primary Brand Colour <i>logo / main background / business cards</i>		Pantone 7690 C	85 / 50 / 0 / 0	61 / 107 / 180	#3D6BB4
Secondary Brand Colour <i>secondary background / accent</i>		Pantone 659 C	56 / 24 / 0 / 0	116 / 156 / 211	#749CD3
Third Brand Colour <i>tertiary background / second accent</i>		Pantone 157 C	2 / 38 / 64 / 0	223 / 155 / 103	#DF9B67
Fourth Brand Colour <i>alternative background / alternative accent</i>		Pantone 584 C	20 / 0 / 100 / 0	201 / 219 / 80	#C9DB50
Alternative Background Colour		Pantone 421 C	0 / 0 / 0 / 30	181 / 178 / 176	#B5B2B0
Text / Content		Pantone Black 6 C	0 / 0 / 0 / 100	42 / 16 / 0	#2A1000
Alternative Text / Content			0 / 0 / 0 / 0	255 / 255 / 255	#FFFFFF

Examples of how the primary logo deals with the alternative colour backgrounds from the suggested scheme.

The only 'rules' are that the colours do not clash and that there is a level of contrast (or difference) between logo, typography and it's specified backdrop.

This also applies to the logo's placement over a photographic background, pattern, visual graphics or other media.

4.0

4.0

Typography

The primary typeface is Lato, selected to best represent the brand image, and must be used to retain consistency.

Replacing fonts with alternatives should *not* be done under any circumstances.

Primary Typeface

Lato (Regular) *Text / Content*

abcdefghijklmnopqrstuvwxyz
ABCDEFGHIJKLMNOPQRSTUVWXYZ
1234567890
